Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, Applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-6, drawn to a pharmaceutical composition comprising a single crystal of a pharmaceutically acceptable crystal lattice component, and an active pharmaceutical ingredient.

Group II, claims 7-9, drawn to methods of preparing the composition of Group I or of stabilizing an active pharmaceutical ingredient.

Group III, claim 10, drawn to a method of administering an active pharmaceutical ingredient.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reason. The pharmaceutical composition comprising a single crystal of a pharmaceutically acceptable crystal lattice component and an active pharmaceutical ingredient cannot be a special technical feature because it does not represent an advance over the prior art. See EP 0052413; Example 7 teaches a pharmaceutical composition comprising a single crystal of Vitamin A and sucrose, Example 8

Art Unit: 1623

teaches a pharmaceutical composition comprising a single crystal of stannous fluoride and sucrose, and Example 9 teaches a pharmaceutical composition comprising a single crystal of ferrous sulfate and sucrose. No other possible special technical feature is apparent. Thus, Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are those specific compounds mentioned in the Markush group of instant claim 14.

Applicant is additionally required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the

Art Unit: 1623

limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Claims 1-13 are generic, and claim 14 is subgeneric.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reason. There is no significant structural element which is common to all members of the Markush group.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
